Gururaj Gali

+91 9880357564 • Bengaluru, India • galigururaj94@gmail.com • GitHub|LinkedIn

Summary

Motivated and detail-oriented Computer Science student with hands-on experience in building Machine learning models and desktop-based software using Java, Python, and modern web technologies. Passionate about solving real-world problems through efficient, scalable, and user-friendly solutions. Eager to contribute to innovative development teams while continuously learning and exploring areas like AI, IoT, and DevOps to build impactful technology.

Technical Skills

Languages: Python, SQL, Java
Web Development: HTML5, CSS, JavaScript
Libraries / Frameworks: NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn
Machine Learning: Linear Regression, Logistic Regression, Decision Trees, Random Forest, K-Means, Model Evaluation
Databases: MySQL
Version Control: Git, GitHub
Tools: Jupyter Notebook, VS Code, Tableau, Power BI, Excel

Projects

Predictive Modeling of Power Demand Link

HTML | CSS | JavaScript | Python | Flask | Machine Learning | Time-Series Forecasting

- Developed and trained Machine Learning models on historical energy and weather time-series data to forecast hourly/daily electricity demand and peak load levels.
- Performed time-series preprocessing, feature engineering, and model evaluation to improve forecasting accuracy.
- Built a Flask-based backend exposing trained ML models through RESTful APIs for real-time predictions.
- Designed a responsive web interface using HTML, CSS, and JavaScript to accept user inputs and visualize predictions and trends with interactive charts.

Butterfly Species Identification Link

HTML| CSS | JavaScript | Python | Machine Learning | Deep Learning | Computer Vision

- Developed an image classification system to identify butterfly species using Machine Learning and Deep Learning techniques.
- Trained and evaluated models including CNN, Transfer Learning (VGG/ResNet), and SVM, achieving up to ~90% classification accuracy on the dataset.
- Performed image preprocessing and feature extraction (color, wing shape, texture, markings) to support automated species identification for biodiversity research and conservation.

Online Chatbot-Based Ticket Booking System for Museum Link

HTML | CSS | JavaScript | React 18 | Mongo DB

- Developed an online chatbot-based ticket booking system that allows museum visitors to interact with a chatbot and book tickets easily.
- Built a responsive frontend using HTML, CSS, JavaScript, and React 18 to provide an interactive user interface and chatbot interaction.
- Used MongoDB to store user data, booking details, and ticket information for efficient management and retrieval.

Education

Reva University	B.tech in CSE | CGPA:7.54 | present
Alva's Pre-University College	PUC | 92.00% | 2022
St Joseph English High School	SSLC | 89.44% | 2020

Certifications

• Python for Data Science	NPTEL, 2024
• Power BI	MeViTechnologies LLP, 2025
• Agentforce Specialist	Salesforce, 2025
• Data Analytics	Deloitte, 2026
